

Below the cmdClick_Click event procedure, write a function named **intArraySum** that computes and returns the sum of all of the elements of an array of integers that contains 10 elements. Notice that the event procedure cmdClick_Click calls the function intArraySum and stores the returned integer sum into a label's caption. After you have written the function, trace the program assuming that the user has inputted the 10 values: 3, 2, 6, 7, 2, 12, 7, 10, 9, 3. Make columns for all local variables and make a rectangle grid for the array itself.

Option Explicit

```
Private Sub cmdClick_Click() J
    Dim J As Integer
    Dim intArray(9) As Integer

    For J = 0 To 9
        intArray(J) = InputBox("Enter an integer:")
    Next J

    lblOutput.Caption = intArraySum(intArray)
End Sub
```
