// Wyo C++  
// Ch. 8 worksheet #7
```

Name -

```
// Trace the following program, showing the intermediate values of  
// each variable. Also, show the output in a rectangle below.
```

```
#include <iostream.h>
```

```
int main()  
{  
    float money = 45.12;  
    int num = 4500;  
    int limit = 0;  
  
    limit = money * 100;  
  
    while (num != limit)  
    {  
        cout << num << endl;  
        num += 2;  
    }  
  
    return 0;  
}
```

```
// money          num          limit
```
