

Fix any compile or logic errors by rewriting the following one-line `if` statements so they follow our Coding Standards.

1. `if num > 0 System.out.println("hello");`

2. `if (x + 9 > Math.sqrt(Math.pow(3, num)) num = 5;`

3. `if (num = 3) System.out.println("goodbye");`

4. `if (3 < num < 10) System.out.println("over here");`

5. `if (num > 5 || < 0) System.out.println("up there");`

6.

```
if (num > 0)
if (num < 10)
    System.out.println("num < 10");
    System.out.println("and num > 0");
else
    System.out.println("num is not greater than zero");
```
