

Answer the following questions by reading the web page <http://developer.android.com/guide/topics/ui/menus.html>

1. As of Android 3.0, how should developers handle the use of menus?
2. What is a context menu and what should developers of Android 3.0 or higher apps create instead of context menus?
3. What is an action bar?
4. What is a popup menu?
5. In what folder (aka directory) should an XML file be placed that creates the interface for a menu?
6. What method is used to handle the action that will occur when a user selects an item on an options menu or an action bar?
7. Read the web page at <http://saigeethamn.blogspot.com/2011/05/options-menu-android-developer-tutorial.html>

Then download the compressed file that is linked as "The complete code is downloadable here" towards the bottom of that web page. Uncompress the zip file and import the project into Eclipse. Execute the project and study its coded.
